

Q Seed Pilot UX 

Helping businesses innovate through
user experience design.

What is design innovation strategy?

DESIGN INNOVATION STRATEGY

Design innovation strategy is about using creative divergent techniques to develop sound strategies that help your business 'innovate' and grow new areas of income.

Put simply...

We have a set of creative tools and strategies that will help your business generate success.

How does it work?

We will collaborate with you and your team to simplify things and return to the basics by examining your business goals, structure, and processes. We will break down the user journey and pinpoint critical areas needing improvement while identifying potential obstacles. At the heart of everything we do is the user - we follow the UCD principles and work directly with your stakeholders and customers to create meaningful services.

To fully comprehend our users, it takes more than just surveys. That's why design thinking is crucial. We will teach you how to ask the right questions and collect the information you need to improve your business in the future.

Why do I need it?

When selecting a product, consumers are not limited to just three options. There could be a multitude of options ranging from 30 to 300. While this can benefit consumers, it creates a challenge for businesses. They need to work harder to catch people's attention and offer better value without incurring high costs that could drive them out of business.

To avoid the risk of costly mistakes, businesses can no longer afford to guess what the user wants. Working on assumptions is a risky method that can cost dearly. We can help you build user-centred solutions that keep the user involved throughout the process, ensuring that you stay one step ahead.
